

Angular

2 - 6

What is Angular

Javascript framework which allows you to create reactive Single-Page-Applications (SPAs)

Versions

- Complete rewrite of Angular 1
- AngularJs vs Angular
- Incremental changes

Debugging

- Compiling errors
- Source maps
- Error messages in the browser console
- Augury

CLI

- Recommended way to start new projects
- Wrapper over Webpack with Angular specific tasks
- Don't get scared of the boilerplate

Docs [here](#)

Exercise

Planning the app

- Nest components by feature
- App component (root)
- Group feature-related files (components, directives, services, models, pipes)
- Use *shared* folder

Planning the app

- Header
- Shoe
 - Shoe-list
 - Shoe-item
 - Shoe-details
 - Shoe-edit
- Wish
 - Wish-List
 - Wish-Details

Data binding

Built-in directives

Components

Directives

Services and DI

Routing

Forms - reactive

Http

Pipes
